Kyle Williams

FRONT-END DEVELOPER

Self-taught developer seeking role on a rapid-paced, innovative development team. Has experience constructing full-stack web applications from planning to deployment. Highly developed troubleshooting capability from experience in a startup environment.

PROJECTS

Invoice Generator — [View Application](#) | [View Codebase](#)

- Constructed front-end form utilizing HTML5, CSS3/Bootstrap, and React that enables users to dynamically add to a list from available products and services.
- Coded back-end API in Express/Node that performs data validation, delivers a JSON response of available products and services to the front-end, and secures 3rd party API key.

Formal Letter Generator — [View Application](#) | [View Codebase](#)

- Created form using HTML5 and CSS3/Bootstrap that displays content dynamically based on user input.
- Assembled back-end server written in Express/Node that securely stores API key, validates user input, and integrates unit testing with the Jest testing framework.
